## Respiratory Virus Multiplex PCR: KZN

## Influenza A detection per week in KZN

### Respiratory Virus Multiplex PCR: September findings

- The most frequently detected viruses during September were Rhino/Enterovirus (32%) and Parainfluenza viruses 1-4 (15%) .
- The amount of Influenza A virus detected has decreased to 12% overall during September.
- A breakdown of the influenza A virus data per week during September shows that there was a gradual weekly decline, with only 2% of specimens testing positive during the last week of September.
