Respiratory virus multiplex PCR: March findings

- The most frequently detected viruses during March were Rhino/Enterovirus (21%), Adenovirus (10%) and Parainfluenza 1-4 (9%)
- RSV increased from 2% during February to 6% in March.
- Please note: the Graph includes the combined data from different Respiratory multiplex assays offered by Ampath laboratories.
- Refer to the Ampath website for the current and previous respiratory viral statistics both countrywide and per region: <https://www.ampath.co.za/respiratory-tract-infection>
