

Percentage of Specimens Positive on the respiratory viral multiplex PCR and SARS-CoV-2 PCR

Percentage of Specimens Positive: COVID-19 PCR and RSV PCR

### Comments

- The most frequently detected viruses during March were rhino/enterovirus (35.6%), rhinovirus (32.1%) and RSV (34.3%).
- A week-by-week breakdown of the SARS-CoV-2 results, show that the percentage positive specimens during March were still low, with 8.6 % of specimens testing positive during the last week of March.
- A week-by-week breakdown of the RSV PCR results shows an increase in the percentage positive specimens during March, with 40.1% of specimens testing positive during the last week of March.
