Respiratory Virus & Atypical Bacterial Multiplex PCR

Influenza A: Jan-Jun 2018

Findings

The most frequently detected viruses during June were rhino/enterovirus (26%), adenovirus (14%) and influenza A virus (13%)

Influenza A activity has decreased from 22% of specimens testing positive during May to 13% of specimens testing positive during June. The majority of influenza A detected was H1N1.

The atypical bacteria were detected at very low levels in both May and June.
